Optimizing rectangle

Out of all rectangles with a given perimeter, which one has the greatest area?

Optimizing rectangle

Out of all rectangles with a given perimeter, which one has the greatest area?

Optimizing rectangle

Out of all rectangles with a given perimeter, which one has the greatest area?

Optimizing rectangle

Out of all rectangles with a given perimeter, which one has the greatest area?

Optimizing rectangular prism

Out of all rectangular prisms with a given volume, which one has the smallest surface area?

Optimizing rectangular prism

Out of all rectangular prisms with a given volume, which one has the smallest surface area?

Optimizing rectangular prism

Out of all rectangular prisms with a given volume, which one has the smallest surface area?

Optimizing rectangular prism

Out of all rectangular prisms with a given volume, which one has the smallest surface area?

Optimizing rectangular prism

Out of all rectangular prisms with a given volume, which one has the smallest surface area?

The rectangular field problem

A farmer wants to fence off a rectangular field and divide it into 3 pens with fence parallel to one pair of sides. He has a total 2400 ft of fencing. What are the dimensions of the field that has the largest possible area?

The rectangular field problem

A farmer wants to fence off a rectangular field and divide it into 3 pens with fence parallel to one pair of sides. He has a total 2400 ft of fencing. What are the dimensions of the field that has the largest possible area?

The rectangular field problem

A farmer wants to fence off a rectangular field and divide it into 3 pens with fence parallel to one pair of sides. He has a total 2400 ft of fencing. What are the dimensions of the field that has the largest possible area?

$$y = \frac{2400 - 4x}{2} = 1200 - 2x$$

$$\text{Area}(x) = 1200x - 2x^2$$

$$\text{Area}'(x) = 1200 - 4x = 0$$

$x = 300$ is an absolute maximum

$$y = 600$$

The rectangular field problem

A farmer wants to fence off a rectangular field and divide it into 3 pens with fence parallel to one pair of sides. He has a total 2400 ft of fencing. What are the dimensions of the field that has the largest possible area?

$$y = \frac{2400 - 4x}{2} = 1200 - 2x$$

$$\text{Area}(x) = 1200x - 2x^2$$

$$\text{Area}'(x) = 1200 - 4x = 0$$

$$x = 300 \text{ is an absolute maximum}$$

$$y = 600$$

Observation: the total length of vertical pieces: 1200 ft
the total length of horizontal pieces: 1200 ft

The rectangular field problem

A farmer wants to fence off a rectangular field and divide it into 3 pens with fence parallel to one pair of sides. He has a total 2400 ft of fencing. What are the dimensions of the field that has the largest possible area?

$$y = \frac{2400-4x}{2} = 1200 - 2x$$

$$\text{Area}(x) = 1200x - 2x^2$$

$$\text{Area}'(x) = 1200 - 4x = 0$$

$$x = 300 \text{ is an absolute maximum}$$

$$y = 600$$

Observation: the total length of vertical pieces: 1200 ft
the total length of horizontal pieces: 1200 ft

These are equal!

Why? Functional explanation

Why? Functional explanation

Let L be the total length of the vertical pieces.

Why? Functional explanation

Let L be the total length of the vertical pieces.

$2400 - L$ is the total length of the horizontal pieces.

Why? Functional explanation

Let L be the total length of the vertical pieces.

$2400 - L$ is the total length of the horizontal pieces.

$$x = \frac{L}{4},$$

Why? Functional explanation

Let L be the total length of the vertical pieces.

$2400 - L$ is the total length of the horizontal pieces.

$$x = \frac{L}{4}, \quad y = \frac{2400 - L}{2},$$

Why? Functional explanation

Let L be the total length of the vertical pieces.

$2400 - L$ is the total length of the horizontal pieces.

$$x = \frac{L}{4}, \quad y = \frac{2400-L}{2}, \quad \text{Area}(L) = \frac{L}{4} \cdot \frac{2400-L}{2}$$

Why? Functional explanation

Let L be the total length of the vertical pieces.
 $2400 - L$ is the total length of the horizontal pieces.

$$x = \frac{L}{4}, \quad y = \frac{2400-L}{2}, \quad \text{Area}(L) = \frac{L}{4} \cdot \frac{2400-L}{2}$$

The can problem

A cylindrical can has to have volume 1000cm^3 . Find the dimensions of the can that minimize the amount of material used (i.e. minimize the surface area).

The can problem

A cylindrical can has to have volume 1000cm^3 . Find the dimensions of the can that minimize the amount of material used (i.e. minimize the surface area).

The can problem

A cylindrical can has to have volume 1000cm^3 . Find the dimensions of the can that minimize the amount of material used (i.e. minimize the surface area).

$$h = \frac{1000}{\pi r^2}$$

$$SA(r) = 2\pi r^2 + \frac{2000}{r}$$

$$SA'(r) = 4\pi r - \frac{2000}{r^2} = 0$$

$$r = \sqrt[3]{\frac{500}{\pi}} \text{ is an absolute minimum}$$

$$h = 2\sqrt[3]{\frac{500}{\pi}}$$

The can problem

A cylindrical can has to have volume 1000cm^3 . Find the dimensions of the can that minimize the amount of material used (i.e. minimize the surface area).

$$h = \frac{1000}{\pi r^2}$$

$$SA(r) = 2\pi r^2 + \frac{2000}{r}$$

$$SA'(r) = 4\pi r - \frac{2000}{r^2} = 0$$

$$r = \sqrt[3]{\frac{500}{\pi}} \text{ is an absolute minimum}$$

$$h = 2\sqrt[3]{\frac{500}{\pi}}$$

Observation: $d = 2\sqrt[3]{\frac{500}{\pi}} \text{ cm}$

The can problem

A cylindrical can has to have volume 1000cm^3 . Find the dimensions of the can that minimize the amount of material used (i.e. minimize the surface area).

$$h = \frac{1000}{\pi r^2}$$

$$SA(r) = 2\pi r^2 + \frac{2000}{r}$$

$$SA'(r) = 4\pi r - \frac{2000}{r^2} = 0$$

$$r = \sqrt[3]{\frac{500}{\pi}} \text{ is an absolute minimum}$$

$$h = 2\sqrt[3]{\frac{500}{\pi}}$$

Observation: $d = 2\sqrt[3]{\frac{500}{\pi}}$ cm $h = d!$

Why is this so?

Why is this so?

$$V_{can} = A_{circle}h$$

$$V_{cube} = A_{square}h$$

Why is this so?

$$V_{\text{can}} = A_{\text{circle}} h$$

$$V_{\text{cube}} = A_{\text{square}} h$$

$$V_{\text{cube}} = \frac{A_{\text{square}}}{A_{\text{circle}}} V_{\text{can}} = \frac{4r^2}{\pi r^2} V_{\text{can}} = \frac{4}{\pi} V_{\text{can}}$$

Why is this so?

$$V_{can} = A_{circle}h$$

$$V_{cube} = A_{square}h$$

$$V_{cube} = \frac{A_{square}}{A_{circle}} V_{can} = \frac{4r^2}{\pi r^2} V_{can} = \frac{4}{\pi} V_{can}$$

$$SA_{can} = 2A_{circle} + P_{circle}h$$

$$SA_{cube} = 2A_{square} + P_{square}h$$

Why is this so?

$$V_{can} = A_{circle}h$$

$$V_{cube} = A_{square}h$$

$$V_{cube} = \frac{A_{square}}{A_{circle}} V_{can} = \frac{4r^2}{\pi r^2} V_{can} = \frac{4}{\pi} V_{can}$$

$$SA_{can} = 2A_{circle} + P_{circle}h$$

$$SA_{cube} = 2A_{square} + P_{square}h$$

Question: is $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Why is this so?

$$V_{can} = A_{circle}h$$

$$V_{cube} = A_{square}h$$

$$V_{cube} = \frac{A_{square}}{A_{circle}} V_{can} = \frac{4r^2}{\pi r^2} V_{can} = \frac{4}{\pi} V_{can}$$

$$SA_{can} = 2A_{circle} + P_{circle}h$$

$$SA_{cube} = 2A_{square} + P_{square}h$$

Question: is $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Answer: $\frac{8r}{2\pi r} = \frac{4r^2}{\pi r^2}$

Why is this so?

$$V_{can} = A_{circle}h$$

$$V_{cube} = A_{square}h$$

$$V_{cube} = \frac{A_{square}}{A_{circle}} V_{can} = \frac{4r^2}{\pi r^2} V_{can} = \frac{4}{\pi} V_{can}$$

$$SA_{can} = 2A_{circle} + P_{circle}h$$

$$SA_{cube} = 2A_{square} + P_{square}h$$

Question: is $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Answer: $\frac{8r}{2\pi r} = \frac{4r^2}{\pi r^2}$ **Yes!**

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

The denominator is the derivative of the numerator!

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

The denominator is the derivative of the numerator!

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

The denominator is the derivative of the numerator!

$$\frac{ar^2}{2ar} = \frac{br^2}{2br}$$

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

The denominator is the derivative of the numerator!

$$\frac{ar^2}{2ar} = \frac{br^2}{2br}$$

Is that a coincidence?

Why $\frac{P_{square}}{P_{circle}} = \frac{A_{square}}{A_{circle}}$?

Equivalently:

$$\frac{A_{circle}}{P_{circle}} = \frac{A_{square}}{P_{square}}$$

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r}$$

The denominator is the derivative of the numerator!

$$\frac{ar^2}{2ar}$$

=

$$\frac{br^2}{2br}$$

=

$$\frac{cr^2}{2cr}$$

Is that a coincidence?

Why $\frac{P_{\text{square}}}{P_{\text{circle}}} = \frac{A_{\text{square}}}{A_{\text{circle}}}$?

$$\frac{\pi r^2}{2\pi r} = \frac{4r^2}{8r} = \frac{?}{?}$$

The denominator is the derivative of the numerator!

$$\frac{ar^2}{2ar}$$

$$\frac{br^2}{2br}$$

$$\frac{cr^2}{2cr}$$

Other boxes

Optimal shape: $h = 2r$

The ellipse inscribed in a semi-circle problem

Of all ellipses inscribed in a semi-circle of radius 1, find the one with the largest possible area.

Hint: If the semicircle is given by the equation $x^2 + y^2 = 1, y \geq 0$, the ellipse should have equation of the form $\frac{x^2}{a^2} + \frac{(y-b)^2}{b^2} = 1$.

The ellipse inscribed in a semi-circle problem

Of all ellipses inscribed in a semi-circle of radius 1, find the one with the largest possible area.

Hint: If the semicircle is given by the equation $x^2 + y^2 = 1, y \geq 0$, the ellipse should have equation of the form $\frac{x^2}{a^2} + \frac{(y-b)^2}{b^2} = 1$.

Answer: optimal dimensions are $a = \frac{\sqrt{6}}{3}$ and $b = \frac{\sqrt{2}}{3}$.
